

Vector® ImmPRESS™ Polymer Reagents

Now available with **Alkaline Phosphatase**

Previously only available with peroxidase, the ImmPRESS™ Reagent is now also available with alkaline phosphatase as the detection system. ImmPRESS™-AP Polymer Reagents provide greater sensitivity than conventional alkaline phosphatase antibody conjugates and other alkaline phosphatase detection reagents for immunohistochemistry and other applications.

The ImmPRESS™ Polymer reagents utilize novel conjugation and polymer chemistries to create enzyme micropolymers that limit steric interference and provide enhanced accessibility to the target.

With our new ImmPRESS™ alkaline phosphatase reagents, alkaline phosphatase substrates can be utilized in single or multiple label protocols with ease.

The ImmPRESS™-AP Polymer Anti-Mouse IgG (Cat. No. MP-5402) and ImmPRESS™-AP Polymer Anti-Rabbit IgG (Cat. No. MP-5401) kits are 15 ml ready-to-use solutions, including 15 ml 2.5% normal horse serum, sufficient to stain approximately 150 sections.

Advantages

High sensitivity

Low background

Non-biotin

One-step detection with shorter assay time

Ready-to-use in convenient dropper bottle with blocking solution included

Simplified multiple labeling

Now with peroxidase and alkaline phosphatase
