# Cloud-Clone Multiplex assay kits

Cloud-Clone Multiplex Assay Kits, based on Multiplex xMAP technology, enable to make rapid and efficient analysis of multiple targets in a single well. Compared to ELISA, Multiplex Assay Kit can provide more data from each sample of plasma, serum, tissue homogenates and cell culture supernates, which is a key feature when sample volume is limited. Furthermore, you could be achieved with a more comprehensive study of protein signaling in precious sample with a single trial.

## Simultaneous analysis of multiple targets with only 20µL samples

## Product Advantages of Cloud-Clone Multiplex Assay Kits

### Wider detection range

1,000-10,000 times wider than common ELISA kits

### Higher sensitivity

10-100 times more sensitive than common ELISA kit

### More reliable result

Data generation from 50 beads per well for each target

### Small sample volume

Minimum volume: 20µL

### Save time and money

Multiple targets can be simultaneously profiled
